# The weighing process in 5 steps

Important changes to the weighing process at Gate 6 of thyssenkrupp Steel Europe for trucks (goods inward, steel shipments, scrap delivery):

To get your truck weighed prior to entering the thyssenkrupp plant site, **from mid November 2017 you must first go to the clearing center (orange).** The only exceptions are trucks weighed on the weighbridge at Gate 7 and shipments destined for weighbridges 18/20.

1. **Park your truck** in one of the designated parking areas (marked with a P).
2. **Then go to the clearing center** and report to the weighing service. Then go to "pre-clearing – weighbridge"

3. Drive your truck to one of the weighbridges located at the terminal. **Your vehicle is weighed automatically** under the supervision of the personnel at the adjacent control center. (Please note: to start with, only one weighbridge will be open and your truck will be weighed manually by an employee.)

4. **Once weighing is completed** after max. one minute, the barrier will open to allow entry or exit.

5. **At the exit you will receive your weighing receipt** (for a transitional period this will be provided by the weighing service at the clearing center).
