Product information for hot-rolled precision strip made in Hohenlimburg

Version 9/21

Microalloyed fine grain structural steel high ductility (HD)

High ductility (HD) microalloyed fine grain structural steels from BU Precision Steel meet the specifications of DIN EN 10149. They are produced with a very fine microstructure and embedded nano-precipitates. These steel grades open up new design options in lightweight auto construction. Their extremely low carbon content counters the formation of coarse and brittle areas in the microstructure.

These materials are particularly suitable for the manufacture of complex forming geometries. Compared with conventional microalloyed steels they offer higher shear strain values and multiaxial elongation for greater process reliability in component production and are readily weldable.

precidur®

- is used in virtually all industry sectors.
- offers close thickness tolerances similar to cold-rolled strip, optimum surface finishes and consistent material properties over the entire strip length and width.
- is characterized by its symmetrical strip profiles and mill edges.
- is the sum of all the experience we have gained in more than 100 years of manufacturing and processing steel.

Technical features

Microalloyed fine grain structural steel high ductility (HD)

Material number: 1.0978

Material name: S380MC / H380LA precidur® HSM 380 HD Proprietary brand:

in accordance with Stahl-Eisen list and VDA 239-100 Delivery specification:

Application: Steels with very good forming, fine blanking and welding properties

Special feature: An adapted and optimized chemical analysis combined with a specially designed hot rolling

strategy creates a ferritic microstructure with nano-precipitates. This results in increased

forming reserves compared with the standard variant S380MC.
